| e1                        | 8      | 130          | 3      |        |          | 20         | 35            | 10          |
|                           |        |              | 238    | 552    | 283      |            |               |             |
| Total                     |        | [m]          |        | 713    | 451      |            |               |             |
| Total                     |        | [kg]         |        | 283    | 200      |            |               |             |

**Note:**

a) Lungimea barelor se va masura si ajusta conform cofrajului.

b) Primul etrier se va aseza de la fata stalpilor/stalpisorilor cat mai aproape de acestia, pe fiecare deschidere, de o parte si de alta.

c) Etrierii din stalpi se continua. FARA a-si modifica distanta dintre ei in zona nodurilor.

**CORECTITUDINEA POZITIONARII ETRIERILOR in ZONA NODURILOI este primul lucru verificat la inspectia fierului !!!**

La montarea grinzilor/centurilor, in noduri, se va tine seama de etrierii stalpilor/stalpisorilor. Lipsa etrierilor din stalpi/stalpisorilor la 10cm din noduri va amana turnarea pana la remedierea si verificarea neconformitatii.

**Lungimea barelor de armatura se va verifica pe cofraj inainte de fasonare.**

**Materiale**  
Beton C16/20 - talpa de fundare de beton simplu  
Beton C20/25 - beton armat  
Otel S235 J2  
Fier beton: B500C (clasa de ductilitate C)
